

Lesson: Perspective

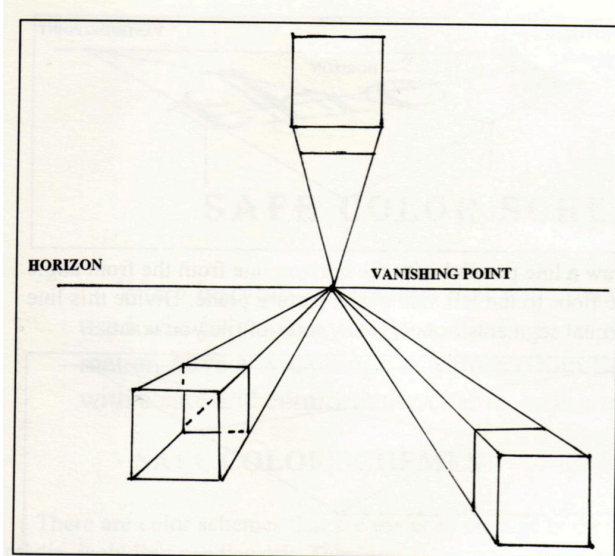

Linear Perspective is a system used by artists in which the relative size, shape, and position of objects are determined by drawn or imagined lines converging at a point on the horizon. It consists of four main components:

- Horizon
- Azimuth or Center Line
- Convergence Lines
- Vanishing Point

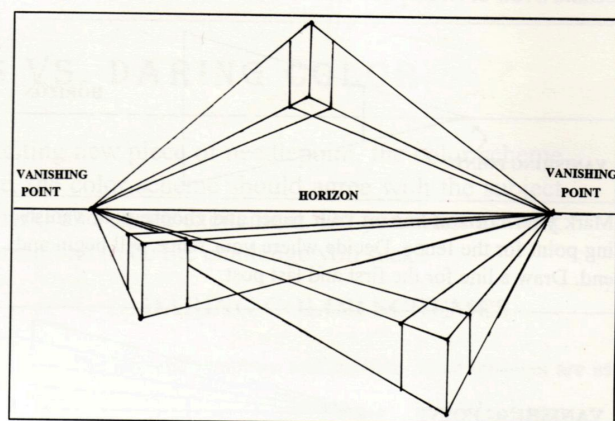

There are three main points of linear perspective that you, as a storyboard artist, will use.

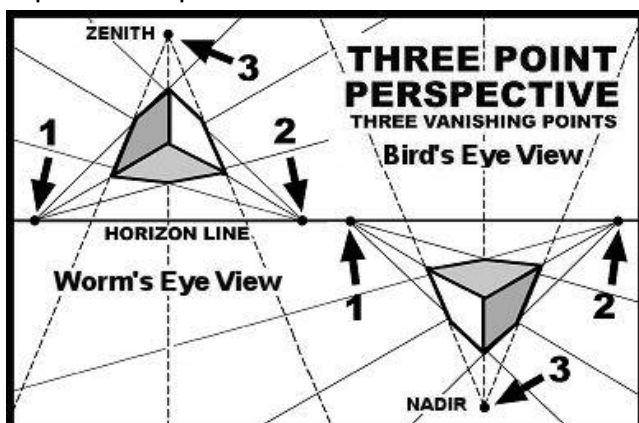

1-point Perspective

2-point Perspective

3-point Perspective

Perspective can continue into a fourth and fifth point however most images that we see are and create are in either 1,2, or 3-point perspective.
